

## New Combination Coatings

**COATINGS** The Adelhalm Group will be showcasing "functional coating systems" at this year's Achema. The new non-stick and corrosion protection MySystem is particularly interesting for the pharmaceutical industry.

Outstanding permeation properties, very good adhesion on metal, even in a vacuum, and high temperature resistance, assure corrosion protection and chemical resistance coupled with excellent non-stick proper-

ties of a previously unattained quality. The coating is suitable for complex geometries such as filter plates or agitators. This PFA material is closely accompanied by new variations of the Halar material which is also

being presented at the exhibition.
